L4: Entry 16 of 16

File: USPT

Jul 20, 1999

DOCUMENT-IDENTIFIER: US 5925351 A

TITLE: Soluble lymphotoxin-.beta. receptors and anti-lymphotoxin receptor and ligand antibodies as therapeutic agents for the treatment of immunological disease

Detailed Description Text (142):

Several systemic autoimmune diseases, including various arthritides, are Th1 cell-associated. Rheumatoid arthritis and Sjorgren's syndrome both appear to involve Th0 and Th1 cells. In contrast, systemic lupus erythematosus (SLE) appears to have an aberrant Th0/Th2 dominated response.

CLAIMS:

5. The method according to claim 1, wherein the lymphotoxin-.beta.-receptor blocking agent comprises a soluble lymphotoxin-.beta. receptor comprising a functional sequence of amino acids selected from the amino acids of SEQ.ID.NO.1, and having a ligand binding domain that can bind to a surface LT ligand comprising at least one lymphotoxin-.beta. subunit.
